CLAIM AMENDMENTS

cl
1 (Currently Amended). A method comprising:

aggregating information [[form]] from two or more web sites on a client;
detecting the occurrence of a predetermined time; and
automatically transferring information to a wireless device at the predetermined time,
from said two or more web sites in a single connection session.

2 (Original). The method of claim 1 including aggregating the information from two or more web sites on a processor-based system connectable to the wireless device.

3 (Original). The method of claim 1 including receiving user requests for information from web sites and storing said information received from web sites.

4 (Original). The method of claim 2 including establishing a telephone connection and during that connection, accessing the requested information from at least one web site.

5 (Original). The method claim 4 including accessing information from at least two web sites using a single connection.

6 (Original). The method of claim 1 including aggregating said information in response to the detection of an event.

7 (Currently Amended). The method of claim 6 including detecting a period of low activity on [[said]] a processor-based system.

8 (Original). The method of claim 6 including detecting a predetermined time.

Claims 9-11 (Canceled).

CI
12 (Currently Amended). An article comprising a medium storing instructions that, if executed, enable a processor-based system to:

aggregate information from two or more web sites on a client;

detect the occurrence of a predetermined time; and

automatically transfer information to a wireless device at the predetermined time, from said two or more web sites in a single connection session.

13 (Original). The article of claim 12 further storing instructions that enable the processor-based system to aggregate the information from two or more web sites for transmission to the wireless device.

14 (Original). The article of claim 12 further storing instructions that enable the processor-based system to receive user requests for information from web sites and store the information received from web sites.

15 (Original). The article of claim 13 further storing instructions that enable the processor-based system to establish a telephone connection and, during that connection, access the requested information from at least one web site.

16 (Original). The article of claim 15 further storing instructions that enable the processor-based system to access data from at least two web sites using a single connection.

17 (Original). The article of claim 12 further storing instructions that enable the processor-based system to aggregate the information in response to the detection of an event.

18 (Currently Amended). The article of claim 17 further storing instructions that enable the processor-based system to detect a period of low activity on [[said]] a processor-based system.

Amendment dated January 12, 2004
Reply to Office Action of October 22, 2003

19 (Original). The article of claim 17 further storing instructions that enable the processor-based system to detect a predetermined time.

Claims 20-22 (Canceled).

23 (Currently Amended). A system comprising:
a processor; and
a storage coupled to said processor, the storage storing instructions that enable the processor to aggregate information from two or more web sites on a client, detect the occurrence of a predetermined time and automatically transfer web information to a wireless device at the predetermined time, from said two or more web sites in a single connection session.

24 (Original). The system of claim 23 including a wireless connection connectable to the wireless device.

25 (Original). The system of claim 23 including an Internet connection.
